Re: Please Conserve Greater Sage-Grouse in the FY 2021 Interior and Environment Appropriations Bill

Dear Chairs and Ranking Members:

On behalf of our millions of members and supporters nationwide, we urge you to please ensure that a rider from previous years prohibiting the U.S. Fish and Wildlife Service (FWS) from considering greater sage-grouse for protection under the Endangered Species Act (ESA) is excluded from the final FY 2021 appropriations bill for Interior, Environment, and Related Agencies.

The greater sage-grouse is an imperiled western bird and the charismatic ambassador for the Sagebrush Sea, an ecosystem that is vital to fish and wildlife, recreation, communities, and sustainable economic development in eleven western states. As many as 16 million greater sage-grouse once occurred across 297 million acres of sagebrush grasslands in the West. Today, sage-grouse range is half of what it once was, and populations have declined to less than ten percent of historic numbers.

Sage-grouse populations have experienced sharp declines in recent years. Montana's population fell

more than 40 percent between 2016-2019; Utah has seen a 61 percent drop since 2015;¹ and Wyoming's sage-grouse population dropped 21 percent between 2018-2019, while the state has counted 44 percent fewer birds since 2016.² Idaho reported a loss of 52 percent since 2016;³ Nevada's 2019 lek counts found a 33 percent decline from 2016; and Oregon's estimated population suffered a 24.9 percent decline in just one year.⁴

Nearly half of sage-grouse habitat has been lost to historic development patterns, while less than 3 percent of the bird's current range is federally protected. Remaining habitat is compromised by impacts from oil and gas drilling, livestock grazing, mining, unnatural fire, invasive weeds, off-road vehicles, roads, fences, pipelines, and utility corridors.

In 2010, the Obama administration found that the greater sage-grouse warranted protection under the ESA, but other, higher priorities precluded the agency from proposing a listing rule at that time.⁵ Recognizing the urgent need for conservation action, the administration took the extraordinary step of amending nearly one hundred federal land use plans across the West with new conservation prescriptions for sage-grouse. The effort engaged states and other key stakeholders in a public planning process to enhance habitat while providing for continued resource management across the bird's range. Citing the "National Greater Sage-Grouse Planning Strategy" (National Strategy) and relying heavily on its projected conservation outcomes, FWS determined in October 2015 that the sage-grouse did not warrant protection under the ESA at that time.⁶ FWS also determined that a status review in 2020 would be necessary to ensure those projected outcomes were sufficiently realized on the ground to keep the bird off the list.

Unfortunately, the Trump administration has reversed course on this unprecedented effort to conserve sage-grouse and its habitat. Both the Bureau of Land Management and the U.S. Forest Service rolled back protections in dozens of public lands management plans that comprise the National Strategy, jeopardizing the 4-year, \$45 million planning effort that enjoyed broad support from diverse stakeholders and competing interests. The amended plans reduce or eliminate protective management buffers around breeding and nesting habitat in designated conservation areas. They also relax critical mitigation and adaptive management requirements. The administration restarted large-scale leasing in priority sage-grouse habitats. And it is now pursuing a slate of regulatory revisions that would elevate land use and development over conservation on millions of acres of public lands. These rollbacks fundamentally undermine the assumptions behind the FWS's 2015 not-warranted decision and significantly increase the chances that sage-grouse listing under the ESA may be required to save the bird from extinction.

⁵ 75 Fed. Reg. 13910 (Mar. 23, 2010).

⁶ 80 Fed. Reg. 59857 (Oct. 2, 2015).

Congress has continuously passed annual appropriations riders blocking FWS from carrying out its basic responsibilities under the ESA concerning greater sage-grouse since 2014. Our organizations have previously expressed concerns that this Congressional intervention would unduly prevent the FWS from properly assessing the condition of the species and would remove necessary incentives to achieve conservation progress under the National Strategy. It is essential that FWS scientists be allowed to do their job in light of the clear and present threats to sage-grouse posed by the current administration's agenda.

We very much appreciated that the FY 2020 House version of the Interior bill excluded the rider; unfortunately, the Senate version of the bill, and then the final conference report, retained it. Time may be running out for the greater sage-grouse and the Sagebrush Sea. Our organizations urge the Appropriations Committee to ensure that the final FY 2021 Interior appropriations bill is free of the rider restricting FWS's ability to take any needed steps to protect this species. We appreciate your consideration of this request and look forward to providing any additional information that might be useful.
